PROFILE

Software Engineer with commercial experience across full-stack web development, internal systems, automation and product delivery. Currently working in Finova's Bristol Broker team, delivering features across a complex fintech CRM platform using Vue, JavaScript, Laravel and PHP. Experienced in building customer-facing functionality, designing REST and GraphQL APIs, profiling frontend and backend performance, improving SQL query efficiency, and maintaining both legacy and modern codebases. Comfortable working closely with Product, QA and stakeholders to refine requirements, demo completed features and deliver reliable software in Agile/Scrum teams.

KEY SKILLS

Languages: JavaScript, TypeScript, PHP, C#, C++, SQL, Swift

Frontend & Mobile: Vue 2/3, Vuex, React, React Native, Expo, HTML5, CSS3, Vite, Responsive Interfaces, Cross-Platform App Development

Backend & APIs: Laravel, .NET, REST & GraphQL API Design, Eloquent, Microservices Exposure, Backend Performance Optimisation

Data & Performance: MSSQL, MySQL, MariaDB, Data Modelling, Query Optimisation, SQL Profiling, Frontend & Backend Performance Profiling

Cloud & DevOps: Azure, AWS, Docker, Git, CI/CD, Azure DevOps, Kubernetes Tooling Exposure

Quality & Delivery: PHPUnit, Jest, Unit Testing, Code Reviews, Debugging, Secure Development, Agile/Scrum, Requirements Refinement, Stakeholder Demos

EXPERIENCE

Software Engineer | Finova 06/2024 - Present

- Build and maintain full-stack product features across Vue, JavaScript, Laravel and legacy PHP within a complex fintech CRM platform.
- Deliver customer-funded enhancements across highly configurable product areas involving dynamic workflows, calculations, data-driven behaviour and customer-specific business rules.
- Optimised key Laravel/API request performance by around 70% through SQL/query profiling, code profiling, request sequencing and execution-flow improvements.
- Design and refine REST and GraphQL API endpoints, data models and backend logic to support reliable product functionality and maintainable integrations.
- Present completed features and technical changes to customers and internal stakeholders, clearly explaining functionality, behaviour, trade-offs and delivery outcomes.
- Take an active role in Agile/Scrum delivery, including sprint planning, refinements, stand-ups and reviews, occasionally leading scrum meetings when required.
- Collaborate with Product, QA and senior engineers to refine requirements, validate behaviour, reduce regression risk and share Vue/JavaScript expertise within the team.

Software Developer | Old Mill 10/2019 - 06/2024

- Designed and delivered bespoke internal and client-facing software solutions using Azure, C#, .NET, Vue, React, JavaScript, PHP, Node.js and SQL-backed systems.
- Built secure systems for transmitting confidential client data and handling business-critical information using Azure services and security-focused development practices.
- Created SQL databases, reporting tools, data models and integrations that improved operational visibility for managers, board members and internal teams.
- Automated repetitive business processes, saving thousands of hours of manual work and helping teams focus on higher-value activity.
- Developed Azure Functions and serverless workflows for importing third-party data into internal reports and analytics processes.
- Worked directly with stakeholders to clarify requirements, document solutions, deliver bespoke tools and iterate on functionality based on real business needs.

Freelance Game Developer | IMD Interactive 12/2020 - 01/2024

- Designed and implemented Unreal Engine gameplay systems using C++ and Blueprints, including UI, player input and gamepad support across multiple platforms.
- Debugged, profiled and tested gameplay features to improve stability, responsiveness and performance across new and existing systems.

- Delivered Unreal Engine marketplace/plugin work, including an Epic Games-sponsored plugin that achieved 250,000+ downloads.
- Worked independently with clients to reproduce issues, document bugs and deliver maintainable gameplay functionality.

Freelancer | Fiverr 06/2018 - 08/2019

- Delivered software debugging and feature implementation services tailored to client requirements, often within tight delivery timelines.
- Built VR gameplay and interactive experience features using Unreal Engine Blueprints.

EDUCATION & TRAINING

- Higher National Certificate in Computing - Data Structures & Algorithms, OOP, Project Management, Web Development, CI/CD, Security.
- Software Development Skills Bootcamp - Data Structures & Algorithms, DevOps, Agile Frameworks, Project Management.
- Microsoft Power Platform Bootcamp - Power BI, Power Apps, Power Automate, Virtual Agents, Pages.
- Infrastructure Technician Apprenticeship - Networking, Security, Cloud Services, Business Processes, Data Structures & Algorithms.
