Artur Dworaczek

Software Engineer

dworaczek.uk | enquire@dworaczek.uk | GitHub | LinkedIn | Deverse

PROFILE

Software Engineer with commercial experience across user interface development, developer tooling, full stack applications and game development. Experienced with C++, C# and Unreal Engine, including creating and maintaining Unreal Engine plugins and editor tooling used by developers worldwide, with more than 250,000 copies distributed through sales and an Epic Games sponsorship deal. Currently working within Finova's Bristol Broker team, delivering and optimising complex user facing software while collaborating with developers, QA and Product in an Agile Scrum environment.

KEY SKILLS

Languages: C++, C#, JavaScript, TypeScript, PHP, SQL, Swift
Game Development and Tools: Unreal Engine, Blueprints, Unreal Engine Plugins, Editor Tooling, Steamworks Integration, Unity, UI Development, Gameplay Systems
Frontend and Mobile: Vue 2/3, Vuex, React, React Native, Expo, HTML5, CSS3, Vite, Responsive Interfaces, Cross Platform App Development
Backend and APIs: Laravel, .NET, REST and GraphQL API Design, Eloquent, Azure Functions, Microservices Exposure
Engineering: OOP, Debugging, Code Reviews, Unit Testing, Performance Profiling, Data Modelling, SQL Optimisation, Requirements Refinement
Cloud and Delivery: Azure, AWS, Docker, Git, CI/CD, Azure DevOps, Kubernetes Tooling Exposure, Agile Scrum

EXPERIENCE

Software Engineer | Finova 06/2024 to Present

- Build and maintain full stack product features across Vue, JavaScript, Laravel and legacy PHP within a complex fintech CRM platform.
- Profiled complex frontend and backend execution flows to identify repeated data transformations, inefficient loading behaviour and unnecessary processing, contributing to performance improvements of around 70 percent in key areas.
- Design and refine REST and GraphQL endpoints, data models and backend logic supporting reliable product functionality and maintainable integrations.
- Work closely with Product, QA and senior engineers to refine requirements, review code, validate behaviour and reduce regression risk while consistently delivering committed sprint work.
- Present completed features and technical changes to customers and internal stakeholders, and occasionally lead Scrum meetings when required.

Founder and Unreal Engine Plugin Developer | Deverse 2021 to Present

- Create and maintain commercial Unreal Engine C++ plugins integrating Steam functionality including leaderboards, statistics, achievements, friends, inventory and subsystem configuration.
- Design developer focused APIs and Blueprint interfaces that simplify lower level Steam functionality and make features easier to integrate into Unreal Engine projects.
- Develop Unreal Engine editor tooling that allows developers to manage Steam subsystem configuration directly inside the editor rather than manually editing configuration files.
- Distributed more than 250,000 copies through sales and an Epic Games sponsorship deal, while maintaining a 5 star customer rating across more than 50 reviews.
- Maintain compatibility across Unreal Engine versions, investigate integration issues and support developers using the tooling in their own projects.

Freelance Game Developer | IMD Interactive 12/2020 to 01/2024

- Designed and implemented Unreal Engine gameplay systems using C++ and Blueprints, including UI, player input and gamepad support across multiple platforms.
- Delivered and maintained user interface and gameplay features while debugging and profiling new and existing systems for stability, responsiveness and performance.
- Integrated third party game platform functionality including achievements and leaderboards while working independently with clients to reproduce issues and deliver maintainable solutions.

Software Developer | Old Mill 10/2019 to 06/2024

- Designed and delivered commercial C# and .NET solutions, including Azure Functions using .NET Core 8, third party API integrations, Azure Key Vault, Blob Storage and internal reporting systems.
- Introduced source control, CI/CD, documentation and more structured development processes while operating as the company's only software developer.
- Created SQL databases, reporting tools, data models and integrations that improved operational visibility for managers, board members and internal teams.
- Automated repetitive business processes, saving thousands of hours of manual work, and worked directly with senior stakeholders from requirements and prototyping through to delivery.

Freelancer | Fiverr 06/2018 to 08/2019

- Delivered software debugging and feature implementation services for international clients across multiple languages, frameworks and existing codebases, often within tight delivery timelines.
- Built VR gameplay and interactive experience features using Unreal Engine Blueprints and maintained a 5 star rating across more than 50 clients.

SELECTED PROJECT

BimmerManager | Solo Developer iOS Product

- Designed and shipped a complete BMW diagnostics product in around three months, combining a React Native user interface with a custom native Swift diagnostic module, SQLite and AWS infrastructure.
- Owned the product from architecture and user interface design through App Store release, customer support and continued development.

EDUCATION AND TRAINING

- Higher National Certificate in Computing: Data Structures and Algorithms, OOP, Project Management, Web Development, CI/CD and Security.
- Software Development Skills Bootcamp: Data Structures and Algorithms, DevOps, Agile Frameworks and Project Management.
- Microsoft Power Platform Bootcamp: Power BI, Power Apps, Power Automate, Virtual Agents and Pages.
- Infrastructure Technician Apprenticeship: Networking, Security, Cloud Services, Business Processes, Data Structures and Algorithms.
